

You are an expert
frontend developer and
UI/UX designer.
Build a complete,
modern personal
portfolio website for me.

PERSONAL

INFORMATION:

Name: [Divyanshu
Kashyap]

Role: B.Tech Student

College: [JECRC
UNIVERSITY]

Location: [Jaipur, INDIA]

Email:

[divyanshu.26bcon0965j
ecrcu.edu.in]

Linkedin: [Divyanshu
Kashyap]

GitHub: [Divyanshu@33]

ABOUT ME:

I am a B.Tech student interested in technology, artificial intelligence, web development and digital productivity. I am learning modern technologies and building practical projects.

WEBSITE SECTIONS:

1.Hero / Home

2.About Me

3.Education

4.Skills

5.Projects

6.Achievements

7.Contact

HERO SECTION:

Display:

- My name
- "B.Tech Student | AI & Technology Enthusiast"

- Short professional introduction
- View Projects button
- Contact Me button

ABOUT SECTION:

Create a professional but student-friendly introduction about me.

EDUCATION:

Add:

- B.Tech

- College name
- Year
- Relevant learning areas

SKILLS:

Create attractive skill
cards for:

- HTML
- CSS
- JavaScript
- Python
- Artificial Intelligence

- Generative AI
- Web Development
- Digital Productivity

PROJECTS:

Create project cards for:

1. Personal Portfolio
Website

2. AI Website Project

3. Student Productivity
Project

Each project should have:

- Project title
- Short description
- Technologies used
- View Project button

ACHIEVEMENTS:

Create a section where I can later add:

- Certifications
- Hackathons

- Courses
- Awards
- Other achievements

CONTACT:

Create a professional
contact section with:

- Email
- LinkedIn
- GitHub

DESIGN:

Make the website:

- Modern
- Premium
- Professional
- Clean
- Responsive
- Mobile friendly
- Visually attractive
- Accessible
- Fast loading

Add:

- Smooth scrolling

- Subtle animations
- Hover effects
- Modern cards
- Good typography
- Responsive navigation
- Mobile hamburger

menu

- Attractive hero section
- Professional footer

TECHNOLOGY:

Use a modern frontend stack that works well with Vercel.

Prefer:

- React
- Vite
- Tailwind CSS

Do not use unnecessary backend functionality.

IMPORTANT:

Actually create all required files in the current project.

Do not merely explain the code.

After creating the website:

1. Install dependencies.
2. Run the website locally.
3. Open it in the browser.

4. Check every section.
5. Check navigation.
6. Check buttons.
7. Check mobile responsiveness.
8. Check for console errors.
9. Fix any errors you find.
10. Improve the design if necessary.
